137 Storer, 11) all life zones, Lower Sonoran, Upper Sonoran, Transition, Canadian, Hudsonian, and Alpine-Arctic, represented in Tübatulabal-Palagewan area.

136 Fauna of area as whole also highly varied, but at present time several animal species Tübatulabal formerly used are either extinct or rare in foothill-valley areas. Jackrabbits, cottontails still abundant in these areas; blue squirrels numerous in foothills. In SM's father's time brown bears were "thick, like hogs" on floor of South Fork valley (SM). Prong-horned antelope (Antilocapra americana americana Ord.) formerly ranged in valley-foothill region, but have been extinct in Calif. since 1900 (Seton, 213, pl. 9). Mt. sheep or Nelson's bighorn (Ovis cervina nelsoni Merriam) formerly dwelt in foothills; California wapiti or dwarf elk (Cervus nannodes Merriam), which is found only in Kern co., Calif. (Anthony, 515), known to informants, but its range did not extend into Tübatulabal area (SM). Single species of deer found in area (SM); probably mule deer, also known as Rocky mt. mule deer or blacktailed deer (Odocoileus hemionus), primitive range of which, according to Seton, extended only into e. part of Tübatulabal area (Seton, 118, map 6), where it was hunted by Tübatulabal (Voegelin, 1935b, 227). Tübatulabal, however, also availed themselves of another species of deer, California mule deer (Odocoileus hemionus californicus) when they went W, beyond limits of their area, to gather acorns (SM).

Snowshoe rabbit (Lepus klamathensis), which lives in high Sierras, known to several informants.

Wild game birds of many varieties formerly plentiful in area; golden eagle nested in region; informants had seen bald eagles at Ventura, but none in Tübatulabal area.

311 241 511 [463] [462 231] [222] 177 Present economic status of group.- Several individuals have retained land granted them in 1893, and cultivate small garden patches, 1/2-1 acre in extent, on their grants. Principal crops are corn, beans, potatoes, tomatoes, peppers, wheat. Majority of young and middle-aged men work as cowboys and ranch hands on stock ranches in South Fork valley; women help men in cultivation of garden patches, and often raise turkeys, chickens, geese, chiefly for family use. In years when piñon crop is good, men, women, and children gather the nuts for their own use and to sell. In 1933 SM was making hair ropes, leather riatas to sell, cultivating garden; ES did a little beadwork, had garden, but relied on her husband, who worked on ranch, for support; LT and FP were being supported chiefly by LT's adult sons, who were ranch hands; MM worked occasionally on ranches, did road work at Bishop, etc. References to other types employment made in FP's, MM's autobiographies (p. 72; Voegelin, 1935 b, 223). None of Tübatulabal, so far as I know, receive any annuities. Census data for 1932 showed there was marked tendency among

161 mission, which Tübatulabal visited, may have
[164] drawn on population between 1775-1825 or if, as SM stated, it did not, epidemics originating at the mission may have caused early depopulation. Possibly the population totaled nearer 500 than 300 in aboriginal times.

165 Causes of depopulation during last 75 years have been Kernville massacre, 1863 (see Autobiography of FP); measles epidemic, 1902; influenza epidemic, 1918.

131 Territorial boundaries.- Boundaries of Tübatulabal and Palagewan territory as defined in
● 311 general way by SM, FP extended W of line drawn from Mt. Whitney along crest of Sierra Nevadas S to Walker pass and from Walker pass SW along s. edge of South Fork valley and down Kern r. gorge to stretch of rapids 1/2 mi. upstream from w. mouth of gorge. From latter point boundary line extended NE along crest of Greenhorn mts., past headwaters of Bull Run creek and NE to Mt. Whitney (fig. 1). The n. two-thirds of area served chiefly as hunting range; SM could give few place names in it, never having pene-
[773] trated far into it; in myth (Voegelin, 1935 b, 193) Coyote and Wolf go to Mt. Whitney to hunt. The s. third of area, in aboriginal times as today, more intimately known and was focus for human activities.

423 Whether Tübatulabal and Palagewan ever laid
621 claim to definitely bounded subareas not clearly determined; in all probability did not, as land ownership, either by individuals or hamlet, band groups consistently denied by informants. Examples numerous of members of both bands ranging in each other's habitat while hunting, fishing, seed gathering.

101 The Bankalachi SM located ca. 1855 at Poso
131 Flat, which is 12 mi. W of junction of Kern r. and Erskine creek, and 5 mi. W of Greenhorn mts. "When I was a boy I visited them there; we had relatives there. There were lots of Tolowim at Poso Flat then" (SM). PN located them at Deer creek. SM's location of Bankalachi is 15 mi. S of territory Kroeber assigns them at headwaters of Deer creek, White r., and Poso creek (Handbook, 610; pl. 47), but evidently Bankalachi were shifting about ca. 1850, as Powers says, "the dwellers on Poso Creek and White River often suffered terribly from (malaria) and, finally, within the American period or very soon before it, they all removed to a place called Whiskey Flat, in the more salubrious region of the foothills, from which they went down to their old home only once a year, in the spring, to gather food seeds" (Powers, 363). "Whiskey Flat" was first American name for Kernville (Pen Pictures, 274), which is on e. slopes of Greenhorn mts. in Palagewan area; Powers may be referring to another Whiskey Flat W of Greenhorn mts., as only a few individual Bankalachi ever lived E of these mts. among Palagewan, although they often visited Tübatulabal area to gather piñons (SM, PN).
